Bedside Control

Turn the bedroom light on and off from bed, with no getting up in the dark and no cable to run. The switches need no batteries.

Wireless bedside switch

Revolution RBC301/302 (1 or 2 gang). Battery-free, 86 × 86 mm, IP67. Sticks or screws to the wall or bedhead.

Matching door switch

Revolution RBC101 mechanism. Fits standard Australian switch plates, so the door switch still looks normal.

Key fob option

Revolution RBC310/320. Battery-free remote for people who can't reach a wall switch.

Receiver at the light

Revolution RBC410R, 10 A / 1000 W LED. Dimmer (RBC412) and light-and-fan (RBC414) versions available.

No batteries

Each press powers the switch itself, so there's nothing to replace.

Several switches, one light

Bed, door and fob can all control the same light.

Local supply

Australian brand from our wholesaler, with a 5-year warranty.

NDIS: typically claimed as Minor Home Modification – Electrical and Door Automation. The OT's assessment decides the final item.

Safe Night Path

Soft, automatic lighting from bed to bathroom. It comes on with movement and stays gentle on the eyes, to help prevent night-time falls.

Night light at the bed

Clipsal Iconic Night Walk (3025NW). Replaces a power point cover plate. Dim warm light all night that brightens when it senses movement, 2–3 m range.

Hallway sensor

Clipsal 753CF1 360° ceiling sensor. Switches the hallway or bathroom light automatically, with an adjustable light threshold so it only works at night.

Hands-free

No hunting for a switch in the dark.

Warm and dim

Enough light to walk safely, without waking fully.

Mainstream products

Established Clipsal range, easy to service later.

NDIS: typically claimed as Minor Home Modification – Other works including Bedroom, or Electrical. The OT's assessment decides the final item.

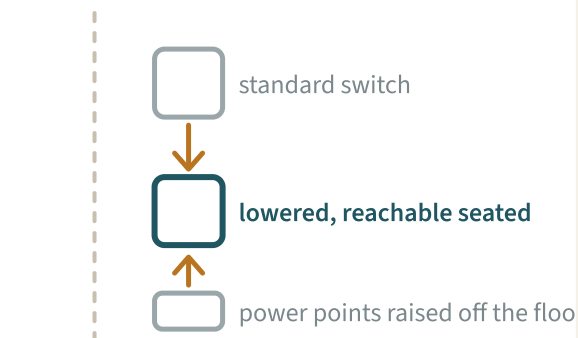

Reach & Access

Switches and power points moved to where they can be reached from a wheelchair, a chair or the bed, without bending or stretching.

USB power at the bedside

Clipsal Iconic power point with USB-A and USB-C (3025USBAC). Charge a phone, hearing aids or a personal alarm with no plug pack.

Switches and outlets at the right height

We move light switches lower and power points higher, to the heights the OT recommends for the person.

Large rocker switches

Easier to press with a palm, elbow or limited grip.

Contrasting plates

Switch plates that stand out against the wall for low vision.

Extra outlets

Fewer extension leads and power boards across the floor.

Fewer trip hazards

Leads off the floor and out of walkways.

More independence

Less need to ask for help with everyday tasks.

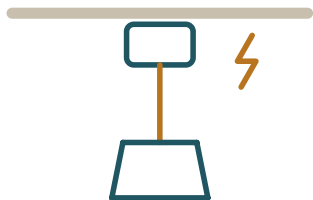

Neat finish

Wall made good around moved fittings.

NDIS: typically claimed as Minor Home Modification – Other works including Bedroom, or Electrical. The OT's assessment decides the final item.

Equipment Power

Safe, dedicated power for the equipment people rely on, installed where the OT and equipment supplier need it.

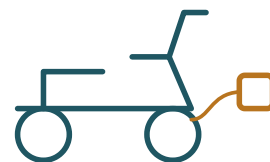

Ceiling hoists

Dedicated power point and circuit at the hoist charging point, coordinated with the hoist installer.

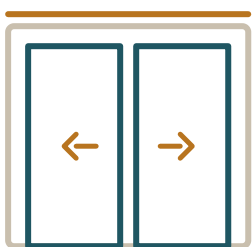

Adjustable and care beds

Outlets beside the bed for the bed, air mattress pump and a lamp, so nothing shares a power board.

Scooter and wheelchair charging

Weather-protected outlet in the garage, carport or entry, with RCD protection.

Power for door operators

We run the power supply and switching for automatic door and gate openers, working alongside the door installer.

Right circuit

Sized and protected for the equipment's load.

Works with suppliers

We coordinate with the equipment installer.

Certified

Certificate of Electrical Safety on every job.

NDIS: typically claimed as Minor Home Modification – Electrical and Door Automation, or Other works. Ceiling hoist work is usually claimed with the hoist under Home Modification – Ceiling Hoist. The OT's assessment decides the final item.

Hear & Alert

Smoke alarms and doorbells that can be seen and felt, for people who are deaf, hard of hearing, or sleep without hearing aids.

Strobe and bed-shaker alarm

Red Smoke Alarms RHIS. A bright strobe light and a vibrating pad under the pillow, triggered when any linked smoke alarm sounds.

- Mains-powered with rechargeable battery backup
- Links wirelessly to Red smoke alarms
- We fit matching Red alarms where needed, so the whole house is linked

Interconnected smoke alarms

Every alarm sounds when one detects smoke, to AS 3786.

Flashing doorbells

A light in the living area or a vibrating pager so visitors aren't missed.

Wakes a deep sleeper

Light and vibration, not just sound.

Whole-house cover

Smoke anywhere in the home triggers the bedside alert.

Tested on handover

We test every alarm and show the household how it works.

NDIS: strobe and vibrating alarms are usually funded as Assistive Technology – Safety Device (flashing or vibrating). Hardwired alarm work may sit under Minor Home Modification – Electrical. The OT's assessment decides the final item.

Bathroom Safety

Bright, automatic light and fans that clear steam on their own, so floors stay drier and there is one less switch to find.

Humidity-sensing exhaust fan

Fanco Chico with humidity sensor and run-on timer. Starts when the room gets steamy and stops on its own.

Automatic bathroom light

Clipsal 753CF1 ceiling sensor. The light comes on as someone walks in and goes off after they leave.

Brighter lighting

Even LED light with no dark corners near the shower or toilet.

Wet-area rated

IP-rated fittings in the right zones around baths and showers.

Part of a renovation

We do the electrical side of accessible bathroom builds.

Drier floors

Less condensation means fewer slippery surfaces.

Nothing to remember

Light and fan look after themselves.

Less mould

Better for people with breathing conditions.

NDIS: usually claimed as Minor Home Modification – Bathroom, alongside the builder's work, or Electrical for stand-alone upgrades. The OT's assessment decides the final item.

How we work with you

A simple process for OTs, support coordinators, plan managers and families.

1

You assess

The OT recommends what the person needs.

2

We quote

Itemised quote, lined up with the NDIS support items.

3

We install

Tidy, respectful work in the person's home.

4

We report back

Photos, certificate and invoice for the plan.

Local to Daylesford and Hepburn

Based in Wheatsheaf, working across Daylesford, Hepburn Springs, Creswick, Trentham, Kyneton, Castlemaine and Ballarat. Short travel times mean quicker visits and follow-ups.

Funding we work with

- NDIS, self-managed and plan-managed
- Support at Home (aged care)
- Private clients and families

Licensed and insured

Certificate of Electrical Safety on every job.

One point of contact

You deal with the electrician doing the work.

Clear paperwork

Quotes and invoices written for plan managers.
